

ENVIRO-TEK Containment Systems

Preinsulated Piping Systems, Inc. offers a wide range of prefabricated and pre-engineered ENVIRO-TEK containment piping systems. Each system is custom designed and engineered to meet the specific requirements of the customer.

The carrier pipe can be of any grade and type commercially available, including, but not limited to: PVC, CPVC, fiberglass, steel, stainless steel, copper, polypropylene, and HDPE.

The standard containment casings are PVC, FRP, and Urethane-coated steel; however, other optional casings are available, including HDPE, Epoxy-coated steel, and stainless steel. We offer multiple pipe systems, insulated systems, heat traced systems, and systems with leak detection.

Please consult your local area representative or our engineering staff for additional assistance in designing your containment system.

Available options include:

- Heat Traced Systems
- Leak Detection Systems
- Multiple Pipe Systems
- Insulated Systems
- Full Time Factory Field Supervision
